SUMMARY

Software Developer with 3+ years of experience developing scalable enterprise applications with a strong focus on C#, .NET, ASP.NET Core, ASP.NET MVC, REST APIs, and SQL Server. Hands-on experience across backend and frontend development using Entity Framework, WCF, Microservices, Angular, React, TypeScript, HTML, CSS, and jQuery. Strong foundation in OOP, design patterns, database development, unit testing, debugging, performance optimization, production support, and Agile/Scrum practices. Additional exposure to LLM applications, RAG pipelines, AI agents, tool calling, and Model Context Protocol (MCP).

SKILLS

- **Languages:** C#, Java, TypeScript, SQL
- **Backend:** .NET, ASP.NET Core, ASP.NET Core Web API, Authentication / Authorization, ASP.NET MVC, WCF, REST APIs, Microservices, Entity Framework, LINQ, Dependency Injection
- **Frontend:** Angular, React, HTML, CSS, jQuery, TypeScript
- **Databases:** SQL Server, MySQL, PostgreSQL
- **Development Practices:** OOP, Design Patterns, DBMS, System Design, Data Structures, Unit Testing, Automated Testing, Debugging, Performance Optimization
- **Tools & Methodologies:** Git, CI/CD, Agile/Scrum
- **AI & Emerging Technologies:** Basic familiarity with LLM applications, AI agents, multi-agent systems, RAG pipelines, prompt-based workflows, tool calling, embeddings, vector databases, semantic search, and Model Context Protocol (MCP)

CERTIFICATIONS

- **Microsoft Azure AI Fundamentals (AI-900)** — Microsoft

EXPERIENCE

Software Developer

Jan 2024 – Present

Utilidex Software Ltd, Noida

- Designed scalable backend REST APIs for billing and invoice processing, handling high-volume transactional data.
- Developed business logic and validation layers using C# and backend application frameworks, with SQL Server stored procedures to maintain data consistency across systems.
- Optimized SQL queries and API execution to improve application performance and reduce response latency.
- Built asynchronous processing flows using design patterns to improve throughput and concurrent request handling.
- Contributed to Agile development cycles through feature delivery, unit testing, debugging, production support, and application enhancements.

Associate Software Engineer

Aug 2023 – Dec 2023

Invia Pvt Limited, Noida

- Developed and maintained backend modules using **ASP.NET MVC and C#** for enterprise-grade applications.
- Designed Entity Framework data models and SQL Server queries supporting core business workflows.
- Built and consumed WCF services to enable reliable cross-application data exchange.
- Applied OOP principles and standard design patterns to develop maintainable and reusable application components.
- Wrote unit tests to validate business logic and reduce production defects within Agile sprint cycles.

Software Developer Intern

Jan 2023 – Jul 2023

Capgemini, Noida

- Developed backend modules using **ASP.NET Core and C#** for enterprise applications.
- Built reusable components supporting scalable application design.
- Applied OOP principles and clean coding practices to improve application maintainability.
- Gained hands-on experience in debugging, testing, and deployment workflows.

PROJECTS

UK Energy Billing & Invoicing Platform

Utilidex Software Ltd

- Worked on a UK-based energy billing application that generates and manages invoices linked to gas/electricity meters across single-site and multi-site customer accounts.
- Implemented business logic to calculate hub consumption rates from meter readings, supporting accurate genera-

tion of debit and credit invoices.

- Built an invoice/bill rerun feature to regenerate bills when consumption discrepancies were identified, including shadow bill comparison to validate corrected charges before finalizing.
- Applied business validation and check-rule logic to ensure billing accuracy and compliance prior to invoice issuance.
- Delivered backend billing enhancements and front-end UI changes, including making the rerun-invoice functionality accessible from the application UI.

Desktop Voice Assistant

- Built a voice-enabled assistant using SpeechRecognition and TTS modules for system-level automation.
- Designed a modular command-processing architecture supporting extensibility and maintainability.
- Simulated real-time assistant behavior using STT/TTS integration.

Grocery Management System

- Developed a distributed system using Java, MySQL, JDBC, and Kafka.
- Implemented consumption tracking logic for automated monthly grocery predictions.
- Designed event-driven workflows for real-time notifications and synchronization.

EDUCATION

B.Tech in Computer Science Engineering

2019 – 2023

- **CGPA: 9.2/10**
